CARB ATCM phase II panels

Prof, in addition to using E1 certified panels in compliance with European formaldehyde emission regulations for both raw product and melamine, has introduced CARB ATCM phase II certified panels, designed with the aim of ensuring the highest quality of materials, combined with a reduced ecological footprint.

CARB ATCM phase II certification sets severe indoor air quality standards for products to ensure a safer and greener environment. Its aim is to reduce formaldehyde emissions and protect the public from the harmful effects of air pollution.
